

AO WATER TECHNOLOGIES

INSPIRED BY CONSCIOUS INTELLIGENCE

At AO Water Technologies our cutting edge devices are designed to stimulate microbiological activity in water to fully utilize its beneficial properties.

With over 20 years of experience in the field of water, we provide sustainable green water technology with zero bio hazard risk for various applications around the world.

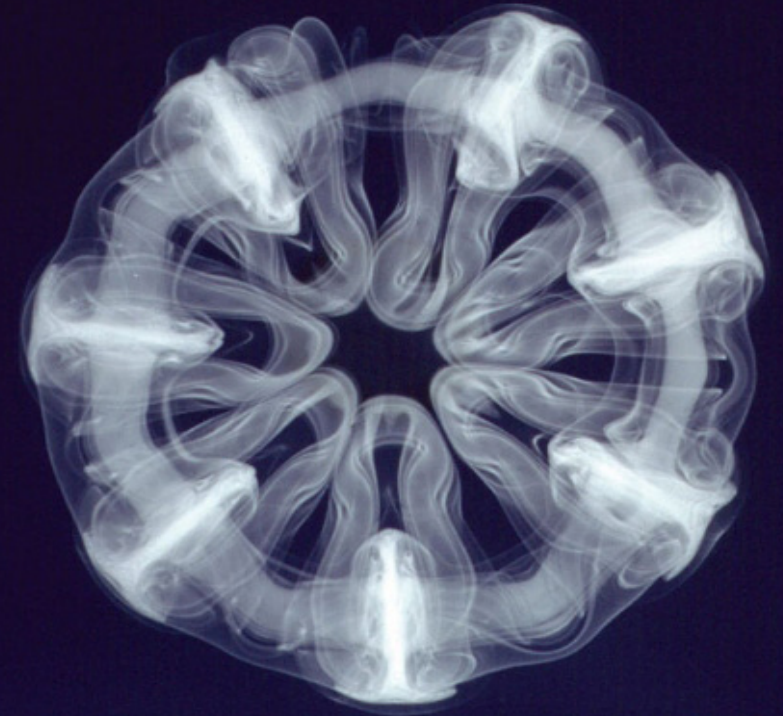

AO WATER TECHNOLOGIES

Various studies have been published on the effect of magnets on water treatment; our devices have built on this knowledge using both high gradient and super-conducting magnets and a variety of other proprietary components; which when optimized, create highly effective devices applied in homes, spas, clinics, manufacturing and farming industries.

Main components of our technology:

- Natural activator built into the device which acts as a catalyst
- Geometry of the probe to enhance the effect of the elements contained in the device.

**** both components are highly proprietary information*

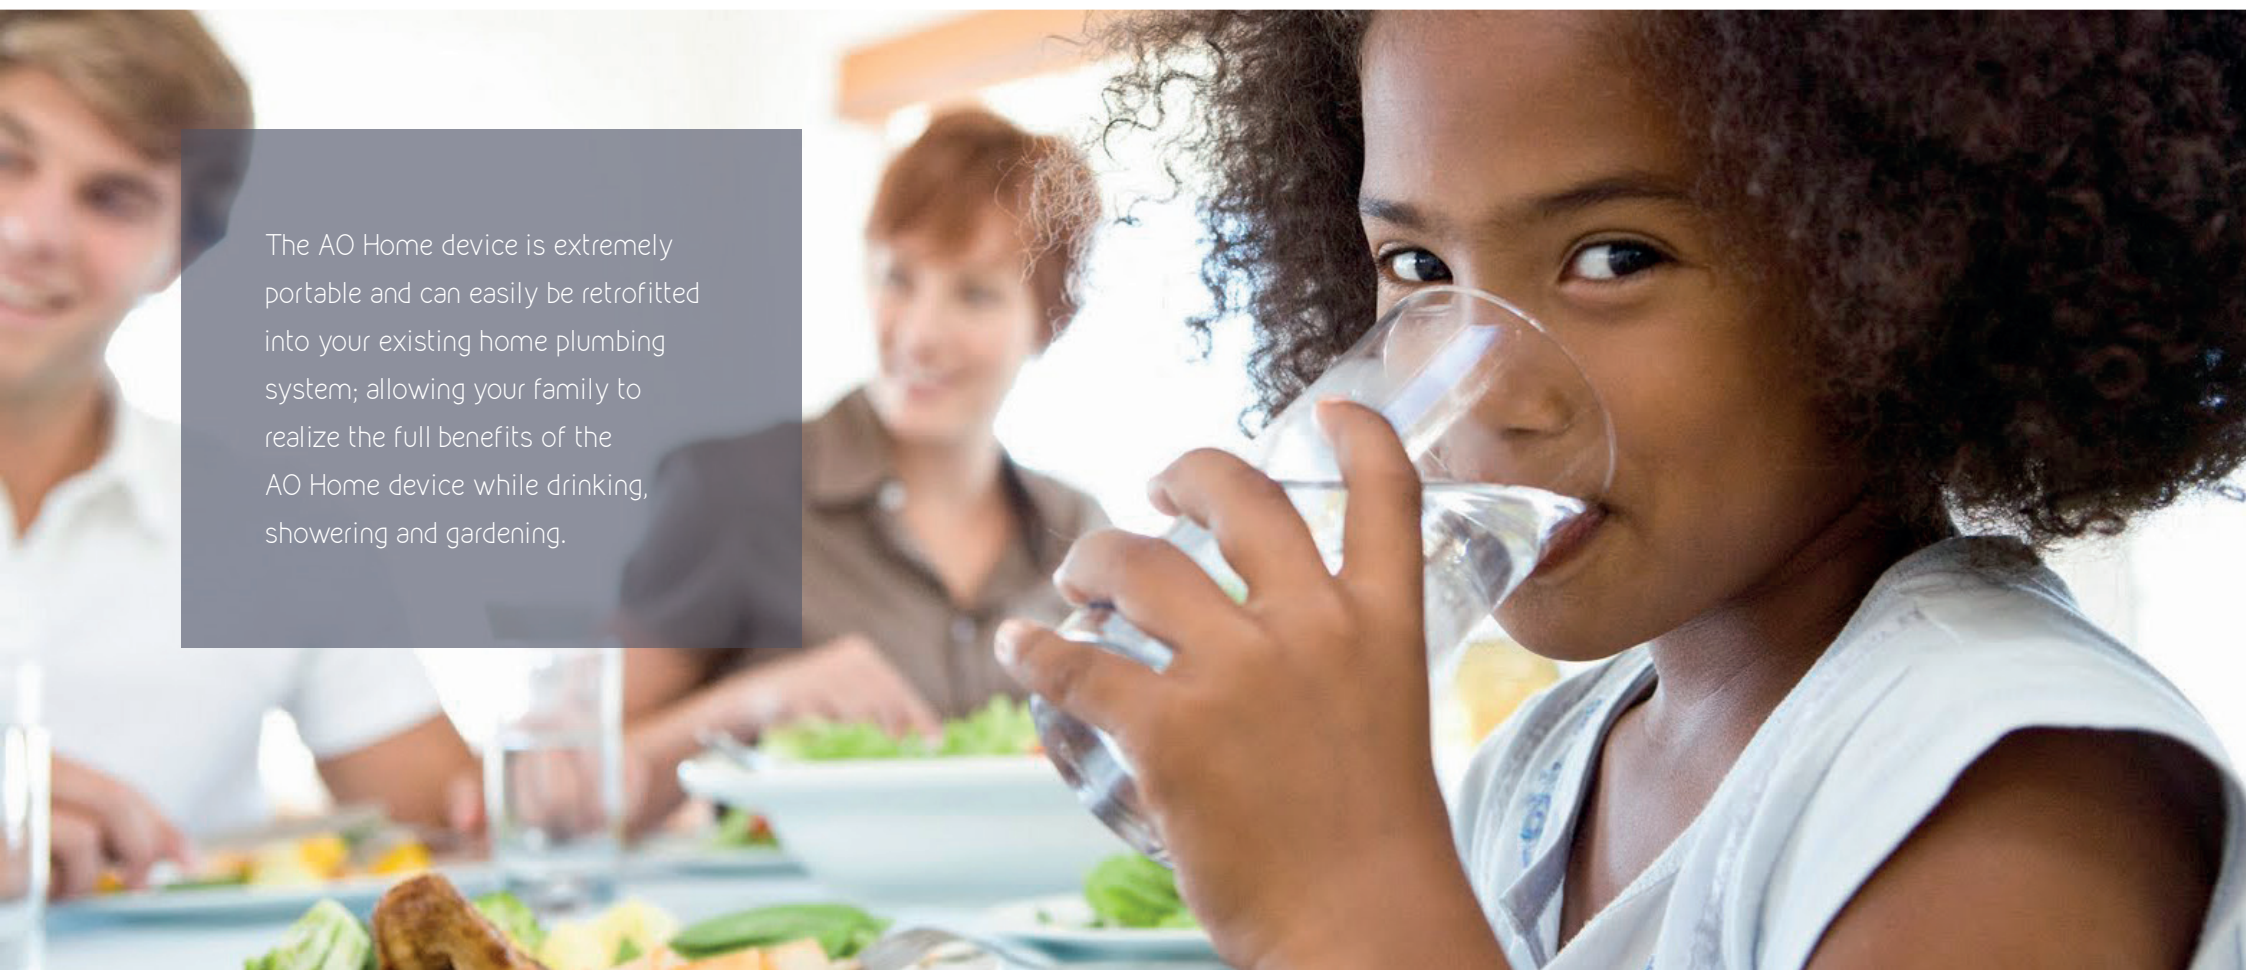

AO WATER TECHNOLOGIES

AO Home

Water plays an essential part in the health of families around the world. As water is the elementary condition for life to grow, it can also change yours.

One of the main components in the AO Home Device is copper in combination with quartz and amethyst. It has been demonstrated clearly in many scientific studies conducted over several decades that copper has rapid, broad spectrum antimicrobial efficacy against some of the most toxic species of bacteria, fungi and viruses.

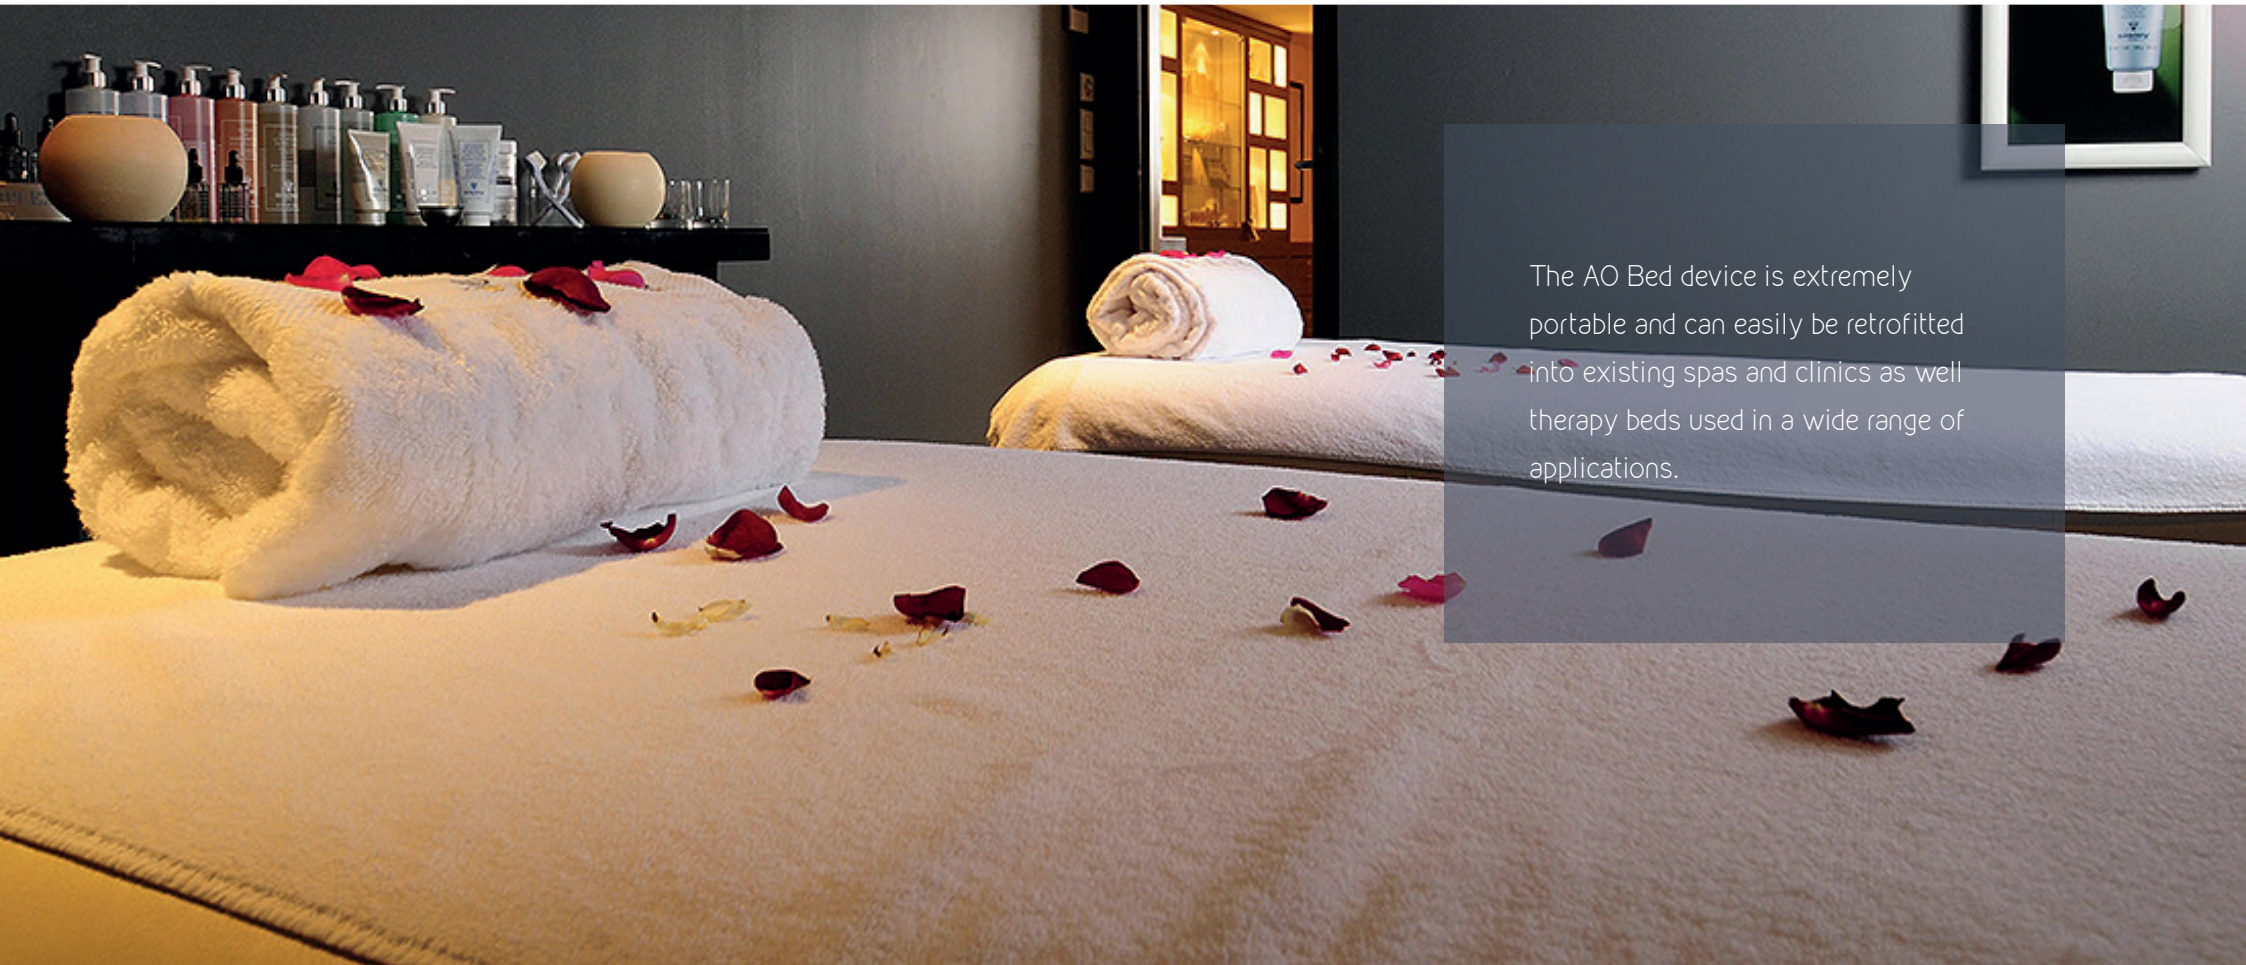

The AO Home device is extremely portable and can easily be retrofitted into your existing home plumbing system; allowing your family to realize the full benefits of the AO Home device while drinking, showering and gardening.

AO Bed

Water has the potential to not only support but to uplift our entire well being. Through years of research and development, we have discovered that water has amazing properties not previously known to western medicine. As modern day technology advances, we can incorporate the elements contained in our devices with teachings from eastern medicine, to fully utilize the positives effects of magnetic fields on water.

The AO Bed device is extremely portable and can easily be retrofitted into existing spas and clinics as well therapy beds used in a wide range of applications.

AO Hydro

Water plays a crucial role in the farming and manufacturing process. By fully utilising the benefits of AO Hydro, the processes can be more efficient, resulting in cost savings and a higher quality product. Studies have shown that magnetised water has a higher pH, conductivity and osmotic pressure compared to non-magnetised water; therefore it has better permeability through microbial cell membranes.

The background image shows a large-scale indoor vertical farming operation. Multiple white vertical towers are densely packed with various green leafy plants. The facility has a high ceiling with industrial lighting and large metal ducts. A semi-transparent text box is overlaid on the left side of the image.

In combination with the proprietary components contained within AO Hydro and the craftsmanship of the device, we can excel in many benchmarks set for the farming and manufacturing industry.

The AO Hydro device is extremely portable and can easily be retrofitted into existing farming and manufacturing plumbing systems.

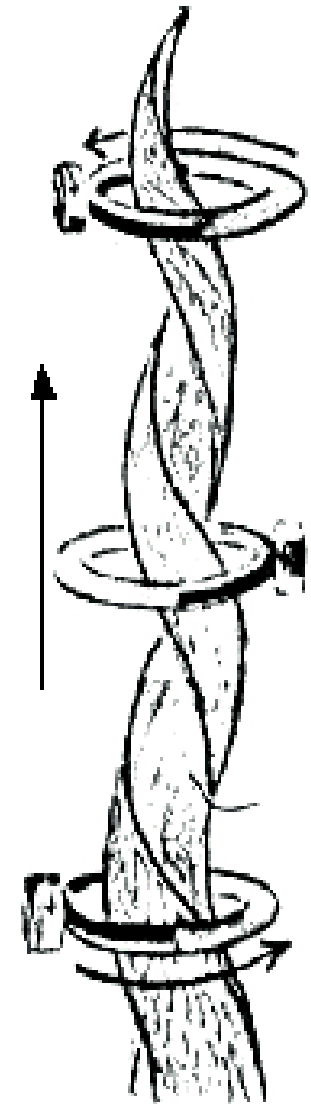

Various independent published studies have shown that magnetic fields under certain conditions can have a beneficial effect on microbiological activity.

Benefits include enhanced enzyme production and oxygen uptake rates (OUR), magnetic fields can also be used to remove color, heavy metals, and toxic chemicals.

These published studies have shown that magnetic flux rates need to be optimized in order to achieve the above benefits; otherwise, there can be no benefit or even worse a negative inhibitory effect.

AO Water Technologies has spent the last 20 years through research and development optimizing our devices to achieve the highest benefits possible.

AO WATER TECHNOLOGIES

Our mission is to partner with those who share our passion for water and its importance in the world. If you are interested in learning more about our products, please contact us.
